HYACINTH BULBS FROM HOLLAND

Hyacinths are a most dependable source of color and fragrance both in the garden in the early spring, and indoors where they are easily forced into bloom during the winter. No other bulb is more easily grown to perfection in bloom. Plant out-of-doors in clumps of three, six or twelve. Set 8 inches apart and cover with 4 inches of soil. Don't mix fertilizer with the soil. Spread it on top after you have the bulbs covered.

It is very interesting to grow Hyacinths in glasses in the house during the winter. Let us tell you how an expert in this art does it. Send for the circular: "How to Grow Exhibition Hyacinth Blooms in Glasses."

Here are the six varieties of Hyacinths we import from Holland, and consider each one of the best of its color:

CITY OF HAARLEM. Large, clear yellow bells on a tall, strong spike.

KING OF THE BLUES. Very fragrant; rich, dark blue.

LA VICTOIRE. Glistening deep carmine-red. Easily forced.

L'INNOCENCE. Large, pure white flowers on strong spikes.

PINK PEARL. Deep rose colored flowers with lighter edges.

QUEEN OF THE BLUES. Large spikes of pale azure-blue flowers.

These Hyacinth bulbs come to us in two sizes. The largest, called by our growers in Holland "Top Roots," 19 centimeters or more in diameter, are the best for forcing indoors in the winter and are often grown outdoors in the garden when particularly large blooms are wanted for show purposes. A second size bulb, 16 to 17 centimeters in size, but of top quality, is offered in the varieties shown above, for planting in the garden.

PRICE OF EXHIBITION SIZE BULBS—19 Centimeters and Over
45c each; \$1.25 for 3; \$4.45 for 12; \$8.75 for 25; \$32.50 for 100.

PRICE OF MEDIUM SIZE BULBS—16-17 Centimeters
35c each; \$3.25 for 12; \$6.25 for 25; \$22.50 for 100.

BOTANICAL TULIPS

These are the wild species, most of them natives of Central Asia. The brightly colored flowers often come with petals that are pointed, twisted and reflexed. In the rock garden these flowers are seen to best advantage. They are a most interesting class of Tulips. Plant the bulbs 8 inches deep and do not fertilize. Put them in a well drained soil and in a warm location. Let them stay where they are, do not move them. They will flower for many years. They are perfectly at home on steep, gravelly slopes and in rock gardens. Always plant them in clumps.

CLUSIANA. The "Little Lady" Tulip. Outer petals cherry-red, inner petals white. Flowers about 1½ inches in diameter on 8-inch stems.

\$2.25 for 12; \$4.45 for 25; \$15.35 for 100

EICHLERI. Large, globe-shaped flowers of crimson-scarlet with a backing of greenish bronze; black center. From Georgia in Asia. 18 inches tall.

\$1.20 for 12;
\$2.30 for 25; \$8.65 for 100

FOSTERIANA, RED EMPEROR (Madame Lefeber). A very long-petalled giant scarlet-red flower, probably the largest red Tulip in existence today. A most unusual flower. It blooms very early in the spring when you really appreciate a spot of color in the garden. Grows 18 inches tall.

\$1.65 for 12; \$3.00 for 25; \$11.45 for 100

KAUFMANNIANA. Creamy white flowers, more or less tinged with rosy red on the outside of the petals. Unusual in form. Often called the Water Lily Tulip. Grows 6 inches high and blooms very early in the spring.

\$1.20 for 12; \$2.30 for 25; \$8.65 for 100

SYLVESTRIS (Florentina Odorata). A sweet-scented wild species of English Tulip that is very fine for naturalizing where it blooms very freely. The flowers are nodding heads of golden yellow on rather strong, sturdy stems about 12 inches tall.

\$1.55 for 12; \$2.90 for 25; \$10.85 for 100

Early Flowering Tulips

FROM
HOLLAND

We are among the largest importers of bulbs for retail re-sale purposes in the country, and have never imported anything but the very best bulbs that can be purchased. These bulbs are of the finest quality that come out of Holland, grown for us by men who have proved themselves for over a quarter of a century to be among the best growers in Holland. Early Single and Early Double Flowering Tulips are very easily forced into bloom during the winter.

EARLY SINGLE FLOWERING TULIPS

These are the short, sturdy-stemmed, early flowering Tulips that are used in beds and borders where Tulips are to be followed with summer flowers. They are also used for cemetery plantings and for growing in places exposed to strong winds.

DOUBLE FLOWERING EARLY TULIPS

Here Is the Way We Plant Tulip Bulbs

Bone meal is spread on the ground where the bulbs are to be planted, using 10 pounds to each 100 square feet (10 x 10). The earth is then spaded to a depth of 12 inches, firmed down and raked smooth. The bulbs are then placed on top of the ground, about 6 inches apart, at the spot where they are to be planted. (Better effects are obtained where at least 6 bulbs of a variety are planted together. We keep them in groups of 25 to 50 of a kind.) A trowel digs out a hole 6 inches deep in which the bulb is set and the hole filled in with earth. The important item of food for the bulb comes next. Tulips, Hyacinths, Narcissus, etc., make their roots right after they are set out in the fall. Large blooms come from bulbs that have large root growth, and large root growth comes from proper feeding. Any complete plant food is good, spreading it on the surface of the ground after the bulbs have all been set, using 5 pounds to each 100 square feet. We finish up with a smooth raking for it will be too late to do this in the spring when the Tulips are breaking through the ground. It is not at all necessary to take Tulips bulbs out of the ground each year. Many bulb gardeners plant them 8 inches deep and never move them.

Our Hyacinth, Tulip, and Narcissus bulbs, and most of the smaller flowering bulbs, too, are grown for us in Holland by top-ranking bulb growers who have been sending us the cream of their bulb crop for the past twenty-five years.
